Developer Manual
Command-line-based Monopoly Game

PolyU COMP3211 Software Engineering Project, Fall 2024

Group 24

November 22, 2024

To run the Command-line-based Monopoly Game, the following steps are required:

1. Download the project to your local machine running MacOS 12 or later, Windows 10 or later, Ubuntu 20.04 or later, or Debian 11 or later.
2. Make sure the Java Development Kit version 21 or later has been installed.
3. Open the project in JetBrains IntelliJ IDEA version 2022.3 or later.
4. Set the Java language level to the SDK default (that supports the `switch` block) and the project SDK to 21.
5. Ensure that the jar files in the `src/lib` directory are added to the project's dependencies or included as external libraries.
6. Set the `src` directory as the source directory and the `test` directory as the test source directory.
7. Run the main method in the `CommandLineBasedMonopolyGame` class inside the controller package in the IDE terminal.
8. Please note that other operating systems, IDEs, terminals, or Java versions are not guaranteed to work.

To build the Command-line-based Monopoly Game, the following steps are required:

1. Open this project in JetBrains IntelliJ IDEA with the required settings above.
2. Navigate to the `Build` menu and select `Build Project`.
3. Ensure that there are no errors in the build process.
4. If the build is successful, the compiled classes will be located in the `out` directory.

To run the project in debug mode, the following steps are required:

1. Open the project in JetBrains IntelliJ IDEA with the required settings above.
2. Set breakpoints in the code where you want to pause the execution.
3. Run the main method in the `CommandLineBasedMonopolyGame` class inside the controller package in debug mode.
4. The program will pause at the breakpoints, and you can inspect the variables and step through the code.
